Sir:

In response to the Office Action dated April 21, 2005, please consider the following remarks.

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) An acoustic horn assembly, comprising:

an unvented acoustic horn for generating a sound pressure level (SPL) at a given frequency, said horn having a mouth end and a driver end; and

sound absorbing material operationally connected to said acoustic horn,
wherein said sound absorbing material is positioned against an unbroken solid portion of said horn defining a nonporous interface therebetween, and wherein said sound absorbing material assists said acoustic horn in directing a desired sound pressure level (SPL) toward a desired location, thereby providing an improved sound coverage field.
